Healthier Hospitals Compliant Products

Wolf-Gordon is committed to product transparency and is happy to share this list of products that comply with the Healthier Hospitals (HH) Safer Chemicals Challenge, Version 2. Sustainability is at the top of our concerns and we continually work with manufacturers to improve the environmental and health impact of our products, while maintaining the performance properties that make them successful throughout the life of a commercial interior.

Many manufacturers face challenges in attaining product ingredient information from their supply chain or, in some cases, have concerns about disclosing proprietary ingredients. To ease the burden, Wolf-Gordon has engaged a sustainability consulting firm to provide our partner mills assistance with data synthesis and documentation.

In accordance with the goals of Healthier Hospitals, the products listed below avoid the use of any intentionally added flame retardants, formaldehyde, perfluorinated compounds, antimicrobial agents, or PVC, without sacrificing performance or durability. For further information, to request documentation, or to order samples, please call 800 347 0550 or visit wolfgordon.com.

Coated upholstery textiles:
Ansonia
Antioch
Aubrac
Chianina
Deltana
